

Alumni Management System — Demo Cheat-Sheet

3-tier: React (frontend) + Django REST API (logic + security) + PostgreSQL (data) + Redis/Celery (background jobs). Runs with a single Docker command. **Punchline:** security isn't just hidden in the UI — every API endpoint enforces a role check.

1. Login & Roles (RBAC) — start the demo here

Role	What they can do	Why
Admin	Everything + Audit Log + delete	Owner of the whole system
Coordinator	Add / edit all modules	Placement team lead
Volunteer	Add / edit data (limited)	Helper / junior member
Alumnus	View only (read)	The alumnus themselves
Read-only	View only	Guest / reporting

Demo logins: Admin → admin@institute.edu / admin12345 | Coordinator → coordinator@institute.edu / demo12345 | Volunteer → volunteer@institute.edu / demo12345

Tip: The Audit Log nav appears for Admin and is hidden for Volunteer — a live proof of RBAC. Alumni data is PII under India's DPDP Act, so access is role-gated.

2. Modules — the role of each option

1	Dashboard What: KPIs + charts across all modules (alumni, students, campaigns sent vs replied, upcoming events, open/placed referrals, SLA breached, hiring-now). Role: A single-glance view of system health. Why: Decision-making: where attention is needed.
2	Alumni What: Master directory: name, batch, branch, company, role-level, domain, city, contact. Plus Status, Super-Alumni flag, Willingness 1-5, DPDP Consent. Filters + CSV import/export (upsert by email). Role: The data the whole system stands on. Why: Student placements come from this network.
3	Students What: Talent profiles: GPA, skills, domain, project highlights. Brochure button = auto 2-page PDF resume. Role: The people we want to get placed. Why: Ready, professional profiles to send to alumni.
4	Companies What: Employer directory: name, sector, 'on the placement list?' flag. Role: Links referrals & job-intel to companies. Why: Know who is hiring / who is an official partner.
5	Outreach (Campaigns) What: Targeted email loop: Create campaign (segment) → Populate (add matching active alumni) → Send. Reusable templates (context/ask/close). Status: Pending/Sent/Replied/Bounced. Role: Reach a whole segment instead of one-by-one mail. Why: Scales engagement + tracks replies.
6	Events What: Drive/webinar/meetup/mentorship + date/venue/capacity. RSVP + attendance tracking. New event = auto announcement mail (BCC, PII safe). Role: Brings alumni & students onto one platform. Why: More networking = more referrals.

7	Referrals What: Placement pipeline Alumni-Student-Company. Stages: New→Contacted→Referred→Interview→Offer→Closed. 48h follow-up SLA — missed = 'breached'. Role: Tracks actual placements = the system's end goal. Why: Keeps leads warm + adds accountability.
8	Job-Intel (Hiring Pulse) What: Monthly ask to alumni: hiring? open roles? timeline (now / 1-3m / 3-6m / no). Auto-triggers on the 1st of each month. Role: Real-time hiring intelligence. Why: See who is hiring now → target students there.
9	Tasks What: Internal tracker: team (Outreach/Events/Referrals/Data), assignee, due date, status. Role: Organises the team's work. Why: Nothing slips, ownership is clear.
10	Audit Log (Admin/Coord) What: Time-stamped record of every action: created/updated/deleted, SLA alerts, emails, pulse triggers. Role: Accountability + compliance. Why: DPDP: trace who touched what and when.

3. Public Forms (no login) & Background Jobs

Public forms: /forms/pulse (alumni submit hiring info themselves) & /forms/rsvp (event RSVP). Low friction — no account needed, data lands straight in the DB.

Celery jobs (automatic): (1) Referral 48h SLA check → breach alert; (2) New event → announcement mail to alumni; (3) 1st of each month → job-intel pulse.

4. Suggested demo order (it tells a story)

1. Login (Coordinator) — 'the placement team's login'
2. Dashboard — health at a glance
3. Alumni — core asset; consent/willingness/super-alumni; show CSV import
4. Students — generate Brochure PDF live
5. Companies — employers
6. Outreach — segment → populate → send loop live
7. Events — create an event, auto-mail goes out
8. Referrals — advance a lead's stage, explain 48h SLA (link to dashboard 'breached')
9. Job-Intel — hiring signal
10. Tasks — team coordination
11. Logout → Admin login → Audit Log = 'everything is traced' (RBAC punchline)
12. Public form (no login) = 'alumni can fill it themselves'
